Feature and Criticism of the Constitution

Human civilization has repeatedly been transformed by technological revolutions, from the steam engine to internet. Artificial Intelligence (AI) represents a new phase in this journey, in which machines can perform tasks that once required human intelligence including language processing, pattern recognition and decision support.

AI offers immense possibilities in healthcare, education, agriculture and governance. At the same time, it raises serious concerns about employment, privacy, inequality, misinformation and global security.

- **AI as an opportunity**
  - **Healthcare –** Early disease detection, medical imaging, personalized treatment.
  - **Agriculture –** Predict weather patterns, detect crop disease, optimize irrigation.
  - **Education** – Personalised learning, multilingual learning, accessibility tools for person with disabilities.
  - **Governance and Public service delivery** – Data Analysis, disaster forcasting Grievance redressal, traffic management.
  - **Economic growth and employment** – Raise productivity.
- **AI as a new global challenge**
  - **Unemployment and inequality –** Automation leads to unemployment
  - **Misinformation –** Deepfakes, AI generated content propaganda videos.
  - **Privacy and Cyber Security –** Cyber attacks, personal data misuse
  - **Bias and ethical concern**
  - **Global inequality and geopolitical risks**
- **Way forward**
  - Ethical and accountable AI
  - Inclusive AI
  - Education and reskilling of workers
  - Human oversight to prevent misuse
  - Global cooperation
- **India's effort**
  - India AI mission, DPDP Act 2023, Digital India "AI should serve humanity, not humanity serve AI".
- **Global effort**
  - AI Impact Summit, New Delhi – New Delhi declaration
  - UNESCO Recommendation on the Ethics of AI (2021)
  - UN resolutions on AI and new UN Mechanism for scientific assessment and dialogue on AI governance.

Conclusion

We need to build the institutions, values and cooperation needed to ensure that light of AI reaches every home while its flames are kept in check. As Mahatma Gandhi asked that every decision be tested against its effect on the poorest and weakest person. If that talisman guides how we design, deploy and govern AI-In India and across the world then this AI will be remembered not as the challenge that divide humanity, but as the opportunity that finally helped humanity to rise.

Life is a long journey from being a human to becoming humane

The statement "Life is a long journey from being a human to becoming humane" highlights the supreme importance of empathy, compassion and kindness in our lives. It reminds us that human is not merely about physical presence, but about upholding our moral and ethical responsibility towards fellow human beings and all other living beings on this planet.

- Human is a matter of birth; humane is a matter of becoming.
- Every human being is born with the capacity to feel, think and act, but compassion, empathy, justice and kindness must be cultivated.
- Life is not merely a journey of survival, success and material achievement; it is also a journey of moral and spiritual evolution.

Humanity has reached the Moon, developed artificial intelligence and split the atom, yet continues to struggle with war, discrimination, hunger and hatred. The real measure of human progress is not how powerful we become, but how compassionate, just and responsible we become.

❑ **Being human**

The biological and social condition of being a member of the human species.

- ☞ Possessing intelligence, emotions and self-awareness.
- ☞ Having needs, desires, ambitions and the capacity to make choices.

❑ **Becoming humane**

The ethical development of a person through values, experience and conscious choices.

- ☞ Empathy for others' suffering.
- ☞ Respect for dignity and diversity.
- ☞ Honesty, fairness, kindness and social responsibility.

❑ **Challenges in becoming humane**

- ☞ Self-interest and excessive materialism.
- ☞ Prejudice rooted in caste, class, religion and gender.
- ☞ Competition without cooperation.
- ☞ Abuse of power and institutional indifference.
- ☞ Online anonymity, dehumanisation and misinformation.
- ☞ Fear, insecurity and the tendency to regard outsiders as threats.

However, Humans possess both selfish and altruistic tendencies; families, institutions, education and personal choices influence which tendencies prevail.

❑ **Way forward: From awareness to action**

- ☞ Integrate ethical education and community service into learning.
- ☞ Practise active listening and empathy in everyday interactions.
- ☞ Challenge discrimination, even when it benefits one's own group.
- ☞ Promote responsible digital citizenship and fact-checking.
- ☞ Strengthen institutions that uphold dignity, justice and accountability.
- ☞ Design public policies around the needs of the most vulnerable.
- ☞ Measure development not only through GDP and infrastructure but also through health, equality, trust and human well-being.

Conclusion

As the Dalai Lama wisely observed "Love and compassion are necessities, not luxuries without them, humanity cannot survive". These moral/human values must become habits, social norms and institutional practices and not only remain confined to speeches and slogans. It is crucial that we strive towards being more humane everyday, and in doing so, we can create a world that is more compassionate, understanding and harmonious for all.

Okhar mein haath, moosar ke deni dosh

This Bhojpuri folk saying conveys a powerful message about blaming others for the consequences of one's own actions. It highlights hypocrisy, avoidance of responsibility, self-deception and the human tendency to shift blame instead of correcting one's mistakes.

- **Literal meaning:** A person puts their hand into the okhar (mortar) and then blames the musar (pestle) for the injury.
- **Symbolic meaning:** People often create the conditions for their own problems but blame external factors when the consequences arise.
- **Core message:** Self-accountability is the foundation of personal growth, ethical conduct and good governance.

❑ **Why do people blame others?**

- ☞ Ego protection: Accepting a mistake hurts one's self-image.
- ☞ Fear of punishment: People conceal errors to avoid criticism or consequences.
- ☞ Self-serving bias: Success is attributed to personal ability, while failure is blamed on circumstances.
- ☞ Lack of introspection: People scrutinise others but rarely examine their own conduct.
- ☞ Group mentality: Individuals blame society, institutions or other communities rather than questioning their own role.

❑ **The other side: Is blaming others always wrong?**

Sometimes responsibility genuinely lies elsewhere:

- ☞ A student may face unfair examination practices.
- ☞ An employee may be blamed for a decision imposed by a superior.
- ☞ Citizens may suffer because of poor public services despite fulfilling their duties.
- ☞ Marginalised communities may face discrimination arising from structural inequality.
- ☞ Therefore, accountability is not the same as accepting all blame.

❑ **Way forward: From blame culture to responsibility culture**

- ☞ Encourage honest self-assessment in families, schools and workplaces.
- ☞ Promote ethical leadership and measurable accountability in government.
- ☞ Conduct root-cause analysis instead of rushing to find scapegoats.
- ☞ Protect people who report genuine institutional failures.
- ☞ Separate honest mistakes from deliberate negligence or corruption.
- ☞ Create systems that reward problem-solving, transparency and learning.
- ☞ Encourage citizens to combine criticism of government with responsible civic participation.

Conclusion

A powerful distinction: Blame asks, "Who can we accuse?" Accountability asks, "What happened, who was responsible, and how do we prevent it from happening again?"

As the Shakespeare said, the fault is often not in our stars but in ourselves. A person, a society or a nation that learns to own its chocies becomes free in the deepest sense, because only those who accepts responsibility for the past can change the future.
